UFED Physical Analyzer 7.6 helps recover critical data from Zalo and SMS database!

RELEASED: JUNE 04, 2018

Cellebrite is happy to announce that UFED Physical Analyzer, UFED Logical Analyzer and Cellebrite Reader 7.6 are now available.

You will notice that in this version we have added new capabilities that will help you reveal a greater amount of evidence for your investigation.

- Recover additional SMS events by decoding the SMS Database icing_mmssms.db for Android devices, while removing duplicate entries.
- View photos and videos by location - Image and video thumbnails are now presented on a map. This allows users to quickly review image and video files with location positions.
- You can now have two views when viewing a chat – A conversation view, and a Timeline Table view of the chat messages per chat. Simply double click the chat conversation or click the conversation view icon.
- Decoding support for the Zalo application (a video calls app with more than 50 million installers) for iOS and Android devices. You can recover data such as user account information, single and group chats, contacts, call logs, locations, pictures and stickers.

Important Reminder

UFED Physical Analyzer can decode full file system extractions of iOS devices, including Keychain. To view the full Keychain in our File Format Viewer, simply right click the Data column in the password model, and select to view the Keychain in the File format viewer.

We have also added support for 135 new app versions for iOS and Android devices, including:

- Dropbox 94.2.6 (Android), 94.2 (iOS)
- Facebook Messenger version 165.0.0.25.92 (Android)
- Gmail version 8.4.8.194949231.release (Android), 5.0.180408 (iOS)
- Instagram version 44.0.0.9.93 (Android), 43.0 (iOS)
- Kik Messenger 13.1.0.7937 (Android)
- LinkedIn 4.1.168 (Android), 13.1.0 (iOS)
- Telegram Messenger 4.8.6 (Android)
- Twitter 7.43.1 (Android)
- WeChat 6.6.6 (Android)
- WhatsApp 2.18.122 (Android)

This version resolves the following issues:

- A crash occurs when pressing press CTRL+A, to select all images in the images thumbnail view.
- Deleted indication appears to all items when generation a PDF report with deleted and non-deleted items for a Mass storage device.
- Decoding of participants in the Viber application's chat messages.
- Decoding when parsing contacts and SMS messages from the Nokia RM 1136 device.
- Decoding while parsing the swiftkey app for Android devices

Cryptographic hash values information

You can validate the integrity of Cellebrite's UFED software files by verifying their cryptographic hash values. This can help you identify whether a file has been changed from its original state

Product	MD5 value	SHA256 value
UFED Physical Analyzer	6266f22b61088616e88e9a7be85e4ea1	11b9dffde0621297165cbb99c0492c22e534ac58ba5b2602c10e47397fddf89f
