

Release Notes

UFED Ultimate, UFED InField, UFED Physical Analyzer, UFED Logical Analyzer & Cellebrite Reader

February 2019

- ◆ Now supporting: 27,785 device profiles
- ◆ App versions: 7,596

Forensic methods	v. 7.15	Total
Logical extraction	135	11,088
Physical extraction*	140	6,757
File system extraction	137	6,709
Extract/disable user lock	232	3,231
Total	644	27,785
*Including GPS devices		

The number of unique mobile devices with passcode capabilities is 5,216

HIGHLIGHTS

App support

- Now supporting deleted data from the WeChat application for Android devices.
- 149 updated application versions for iOS and Android devices.

Industry first: Samsung Exynos physical bypass solution

As Cellebrite continues to pioneer the world of mobile device extractions, we are the first vendor in the industry to provide a generic solution to access Samsung devices with the Exynos processor.

This new decrypting bootloader capability enables unlock, full file system and physical extractions from a vast range of Samsung devices, popular around the world. Together with the support for Samsung Qualcomm devices, Cellebrite is the only vendor to provide a holistic solution to unlock and extract data from Samsung devices.

Supported devices include: SM-G930F Galaxy S7, SM-G935F Galaxy S7 Edge, SM-A520F Galaxy A5 2017 and SM-J730F Galaxy J7 Pro.

Get to evidence faster with Selective Extraction

When time is of the essence, and decisions need to be made quickly, examiners can use the new Selective Extraction capability to perform fast and focused extractions. This capability allows them to pick and choose the applications in which they suspect contains relevant data or leads, perform a Selective Extraction rather than waiting several hours for a full file system extraction.

With Selective Extraction you can immediately surface the 'Who, What, Where and When' by opening the extraction and automatically decoding it in UFED Physical Analyzer. Watch the video for a walk through of this time-saving capability.

How to use this capability:

1. You'll need cables 500, 501 & 508.
2. Locate the generic profile "Generic profile/Android/disable user lock select the LockPick button. For tested devices, locate the specific device profile and select the LockPick button located under the disable user lock path.
3. Follow the on-screen instructions.

What you need to look out for:

1. This method works only on devices protected by Full Disk Encryption (FDE, and *not* File-Based Encryption-FBE or Secure Startup), with OTG available.
Make sure to follow the UFED instructions (power off the device before each unlock attempt).
2. If you are not sure if the device is FDE you can:
 - a. Look at our tested devices as reference table.
 - b. Search for similar devices and run the ADB command 'adb shell getprop ro.crypto.type' to find out the encryption type. "block" means FDE while "file" means FBE.
 - c. FBE devices should boot to the lock screen with text along the lines of "Unlock for all features and data / PIN required after device restarts".

When two extraction methods become one, Advanced Logical extraction in UFED

The new Advanced Logical extraction method in UFED combines both the logical and file system extractions into a single extraction method for iOS and Android devices. This new option helps users overcome the pain of long and convoluted extractions, saving time and effort while maintaining forensically sound data.

Note: For iOS devices, both Advanced Logical extraction in UFED and Advanced Logical extraction in UFED Physical Analyzer are extracting the same data, so there is no need to perform both extractions.

Conversation View in Reports

You requested, we delivered! Chat bubbles can now be viewed in reports. Both UFED Physical Analyzer and Cellebrite Reader now support conversation view in PDF and HTML report formats (including export). This allows any report reviewer to present the data in the most common and simple way.

New enhancements to the Premium Languages translation from SDL

Cellebrite's translation services partner, SDL provides you with professional and high-end translations. This offline translation offering has been extended to allow users to manually select the source language and define the target language for more accurate translations.

The Premium Language translation package supports 70+ languages including Arabic, Farsi and Turkish. All of this is available in UFED Physical Analyzer for an additional fee. To use this feature, please contact your sales representative.

New support for the WebP image format

WebP is natively supported in Google Chrome and the Opera browser and can be recovered on Apple iOS extractions. UFED Physical Analyzer now support this format.

Solved Issues:

- Partial decoding of Samsung notes (missing body)
- Error whilst running the image carving capability
- Unit default value when Mapping to activities model in SQLite Wizard
- Failure while generating report for TomTom devices
- Missing TomTom trip logs waypoints
- Incorrect positioning of locations when generating HTML report with enriched locations (enriched location exported as [0,0])
- Decoding failure for WeChat version 6.5.21 for iOS devices

Cryptographic Hash Values Information

You can validate the integrity of Cellebrite's UFED software files by verifying their cryptographic hash values. This can help you identify whether a file has been changed from its original state.
