

Cellebrite Premium

Unlock crucial mobile phone evidence from all iOS and high-running Android devices

Locked devices and encryption barriers can result in extended investigation times, leading to additional costs and lower clearance rates. As smartphones continually have smarter and more protective features, including implementation of complex locks and built-in encryption mechanisms, unlocking and extracting data from market-leading iOS and Android devices has become a constant challenge.

Cellebrite Premium is the only on-site solution in the market today that enables you to recover the passcode, unlock and perform a full file-system extraction on Apple devices running the latest iOS versions. But it doesn't stop there. With Cellebrite Premium you can bypass locks and perform a physical extraction on many high-running Android devices. By performing full-file system and physical extractions, you can get much more data than what is possible through a logical extraction, and access highly protected areas such as the iOS Keychain or the Secure Folder.

Accessing 3rd party application data, stored passwords and tokens, chat conversations, location data, email attachments, system logs, as well as deleted content, increases your chances of finding the incriminating evidence.

Cellebrite has a proven and unmatched track record of delivering innovative digital forensic solutions, that help law enforcement globally to access data from hundreds of devices. Recover and examine evidence that you can stand behind in court, from the convenience of your forensics lab, and rest assured the chain of custody is maintained.

Key Benefits for iOS Data Extraction

Unlock Apple devices

Determine passcodes and perform unlocks for all Apple devices running the latest iOS version.

Sophisticated algorithms to minimise unlock attempts

When brute-force attempts are required to reveal the device passcode, you can shorten unlock times by creating case-specific custom dictionaries optimized for the exhibit.

Perform a forensically sound full file-system extraction

- Bypass iTunes backup encryption to extract all data possible
- Gain access to stored passwords and tokens from the Keychain
- Recover data from 3rd party applications including WhatsApp, Facebook, Telegram and many others
- Get emails and attachments
- Get location information from multiple streams of data (WIFI and Cell towers)
- Reveal system logs and application log data

Collect data even when the device is locked

Perform partial extractions before determining the passcode to immediately access data from the device's file system, in those critical first moments.

Key Benefits for Android Data Extraction

Unlock Android devices

Bypass or determine locks on all flagship Samsung devices and select Android devices

Perform a forensically sound full file-system or physical extraction

- Gain access to app data protected with additional passcodes via KNOX Secure Folder
- Extract unallocated data to maximize recovery of deleted items
- Recover data from 3rd party applications including WhatsApp, Facebook, Telegram and many others
- Get emails and attachments
- Get location information from multiple streams of data (WIFI and Cell towers)
- Reveal system logs and application log data

Support for the Widest Range of Devices

Apple Devices

- Apple iPhone 4S- iPhone X
- Apple iPad 2, 3rd/4th Gen, iPad 5/6th Gen, iPad mini 1st Gen, 2, 3, 4, iPad Air, Air 2, iPad Pro
- Apple iPod touch 5th/6th Gen
- iOS 7 to iOS 13.3.x

Samsung Devices

- Exynos 8 Octa 8890 e.g. Galaxy S7 / S7 edge (International)
- Exynos 9 Series 8895 e.g. Samsung Galaxy S8 / S8+ / Note 8 (International)
- Exynos 9 Series 9810 e.g. Samsung Galaxy S9 / S9+ (International)
- Samsung Galaxy S7/S7+/S8/S8+/S9/S9+/S10 (U.S. / Canada)
- Samsung Galaxy Note 9 / Note10 (U.S. / Canada)

More Android Devices

Supporting popular models from Android vendors like; Motorola, Sony, OPPO, Xiaomi, VIVO and others.

This list is continuously updated and may depend on operating system updates. Please contact us to get the latest information about supported devices.

Our certified forensic experts can also help you gain access to sensitive mobile evidence from several locked, encrypted or damaged iOS and Android devices using advanced in-lab only techniques.
