

# Stay on Top of Your Investigations with a Case Management Solution

Law enforcement agencies are constantly battling the same issues as caseloads increase: How to effectively create, manage and access large amounts of data to close cases quickly and accurately.

And in times like these, where electronic evidence and device backlogs are on the rise, there becomes a critical need for investigators and managers to gain visibility into the operational labs, while ensuring SOPs are enforced and priorities are maintained.

## Why Should Your Agency Consider a Case Management Solution?

A case management and workflow orchestration solution has become an inevitable component in modern day investigations. It enables the consolidation of all activities through one centralized system, enhancing collaboration and information sharing, while providing full control over case lifecycle, in real-time.

### EVIDENCE TRACKING

Capture entirety of case interaction phases, tracking digitally every movement, status, action, task, report and retention through the exhibit's entire lifecycle.

### CHAIN OF CUSTODY MANAGEMENT

Register assets in the system, validate in license where applicable and reveal to user if defined criteria are met. Each time the asset is used it is registered to where, who, when, why and what.

### QUALITY MANAGEMENT

Establish workflows that reflect SOPs ensuring all investigations are repeatable and defensible. Drive compliance through the elimination of human error to maintain an accredited standard.

### OPERATIONAL EFFICIENCY

Automation and tracking capabilities enable stakeholders to achieve optimal efficiency, resulting in better productivity and ROI.

### REAL TIME VISIBILITY

Provide granular controls for oversight across case lifecycle, activities and tasks with instant feedback of case status. Gain full visibility of chain of custody for tracking and managing end to end evidence movements.

### WORKFLOW ORCHESTRATION AND AUTOMATION

Create unique and configurable workflows to reflect your agencies exact standard operating procedures, handing off tasks and pausing next steps until precursors have been actioned.

### COMPREHENSIVE REPORTING

Built-in customisable dashboards offer granular insight into case status, workloads, SLAs and more. Reports designed to auto-generate and send to defined recipients or distribution groups.

## Introducing Cellebrite Guardian

Cellebrite Guardian is a Case Management and Orchestration Solution designed for forensic, investigation and intelligence divisions, helping standardize and optimize the flow of cases with proven technology, processes and data visualization.

Cellebrite Guardian is powered by Black Rainbow®.
