

PRODUCT OVERVIEW

Command your fleet of tools and processes, accurately and efficiently

With digital evidence now linked to most incidents and investigations, agencies are expanding their digital capabilities in the lab and in the field. With more tools in use, you need to be able to centrally manage how your digital intelligence solutions are deployed and utilized with speed and ease.

Enter Cellebrite Commander, the solution that simplifies how you manage and control all deployed devices and systems:

- Manage Your Fleet Centrally
- Keep Current with Policies and Permissions
- Optimize Device Usage

- Ensure Evidentiary Integrity
- Create End-To-End Visibility

Manage Your Fleet Centrally

Simplify device and system management, and reduce administration costs by remotely distributing and installing software updates and configuration modifications.

Ensure Evidentiary Integrity

Automatically back up the metadata of every extraction and have a transparent, auditable and defensible chain of custody. Maintain the latest versions and configurations to ensure forensic integrity of the data collected.

Keep Current with Policies and Permissions

Centrally manage system usage, both at the user and device level, to ensure that agency policies and user permissions are in sync, enforced and up to date.

Create End-To-End Visibility

Generate dashboards and statistical crime type reports to share with your team and agency management to optimize the value of your digital technology investments.

Optimize Device Usage

Easily gather important utilization insights with robust auditing and reporting capabilities, to identify operational efficiencies and improve usage of your devices and systems – whether in the lab or deployed remotely in the field.

We recommend Cellebrite Commander if you have at least 5 units of the following solutions:

- Cellebrite UFED
- Cellebrite Responder
- Cellebrite Physical Analyzer
- Cellebrite Logical Analyzer
