

# The Power of Advanced Data Collection at Scale

Cellebrite  
**PREMIUM ES**

## Increase Agency Productivity With a Solution That Scales Advanced Data Collection

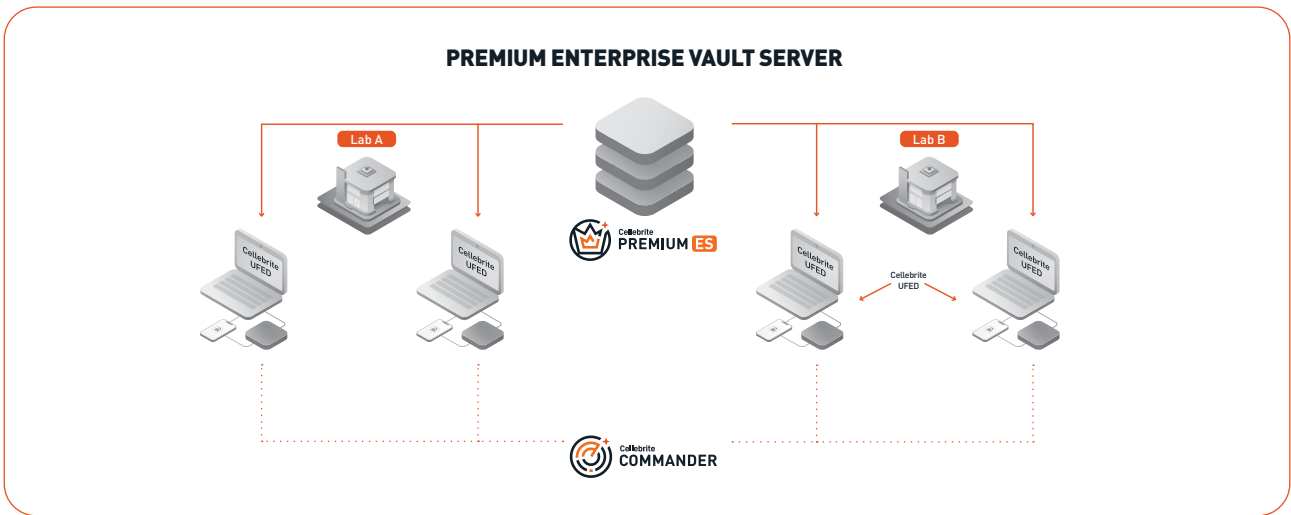

Cellebrite Premium ES is an industry-leading, server-based solution, that increases the capacity of agency labs to lawfully access a wide range of iOS and Android mobile devices from multiple Cellebrite UFED end points.

## Accelerate Time to Evidence

With Cellebrite Premium ES, agencies can enhance their Cellebrite UFED fleet to:

- Access advanced mobile devices
- Collect more digital evidence
- Increase operational efficiency
- Reduce unnecessary backlogs

## How Does it Work?

- Cellebrite Premium ES is deployed on an agency server and connects multiple Cellebrite UFED end points to the Enterprise Value Server (EVS) using a special adaptor.
- The EVS supplies the resources necessary to gain access to advanced iOS and Android devices for collecting digital evidence.
- Cellebrite Commander enables agency staff to control each action at the UFED end point.

Cellebrite Premium ES is the scalable solution for advanced device access and data collection from multiple Cellebrite UFED end points.

## Key Benefits

### Scale up with an agency-wide, enterprise-grade, solution

Flexible packages to meet various agency need.

### Boost case productivity

Tackle lab backlog by empowering UFED end points with Premium capabilities, when and where needed.

### Improve operational efficiency - Maintaining chain of custody

Eliminate the need to transfer locked or encrypted devices to a central lab, by securely connecting to a central Premium unit..

### Get closer to digital policing - Centralized user and fleet management

Combined with Cellebrite Commander, you can better manage your Cellebrite fleet and gain transparency from one simple dashboard.

We have included a range of complementary services to ensure you maximize all capabilities of Premium ES.

- System installation and configuration by our experts
- A hands-on advanced mobile forensic workshop where we will cover: iOS and Android security mechanisms and capability theories, best practices, and tips and tricks
- Annual onboarding of new team members, and advanced training for existing users
