

Gather Digital Evidence Faster to Reduce Recidivism

Federal law enforcement officers working for the U.S. Federal Courts can expedite data collection and analysis while reducing chain-of-custody risks with Cellebrite's Digital Intelligence Platform.

One of the justice system's primary objectives — and most significant challenges — is reducing recidivism. Evidence-based practices, including the collection and analysis of data from digital devices, are crucial to the work of federal probation and pretrial officers working for the U.S. Federal Courts and toward that critical objective. However, the lack of resources, including time and trained staff to conduct digital forensics, can prevent timely identification of individuals violating their supervision terms before they pose a risk to themselves or the public.

In a recent study, 96% of law enforcement investigators said their investigations could benefit from more effective tools to accelerate time-to-evidence. With Cellebrite as a mission partner and our industry-leading Digital Intelligence (DI) solutions enhancing investigative workflows, federal probation and pretrial officers can force-multiply the capabilities of their teams to overcome resource gaps and speed digital investigations. Cellebrite provides:

- Advanced capabilities for the swift collection, review and analysis of digital evidence, regardless of its source or format
- Secure data storage, integration, and management
- DI training and certifications that equip staff members with the skills and knowledge to collect and handle digital evidence appropriately

With Cellebrite, federal probation and pretrial officers, and U.S. district court staff collaborating on digital investigations can also protect the chain of digital evidence more confidently and provide those who are presenting in courts with defensible, relevant evidence protected through an auditable chain of custody that is court-ready.

Why Partner With Cellebrite?

Cellebrite helps federal probation and pretrial officers working for the U.S. Federal Courts in their mission to make the criminal justice process effective and the public safe — and help reduce recidivism. We provide industry-leading DI solutions, training, and services that can help these federal law enforcement officers and the U.S. district court employees who support their critical work to:

- Acquire, analyze, and manage digital evidence for investigations more efficiently
- Defeat encryption on digital devices quickly while ensuring vital data isn't lost
- Target very discrete data sets for exploitation
- Validate data confidently and protect its provenance
- Create visualizations of data that are easy to interpret and share
- Provide actionable information for critical decision-making faster
