Cellebrite

Inseyets

New Capabilities: Triage & Quick View

Digital investigations often involve large volumes of data, making it challenging for examiners to efficiently identify relevant devices and prioritize evidence for analysis. This process can be time-consuming and may delay case resolution.
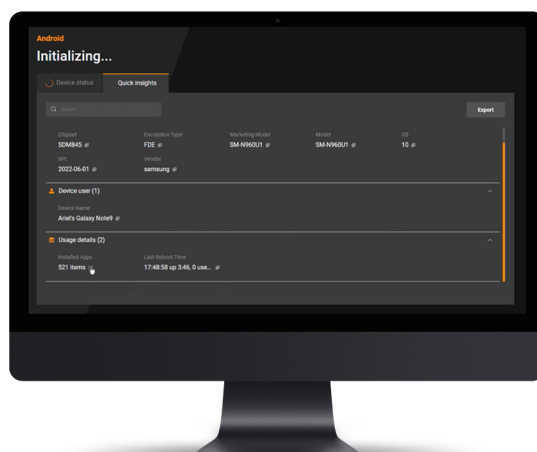

Cellebrite Inseyets offers a comprehensive suite that allows examiners to leverage customizable search criteria, and to quickly flag relevant devices, significantly improving device prioritization, reducing processing time and backlogs to increase meaningful data extractions.
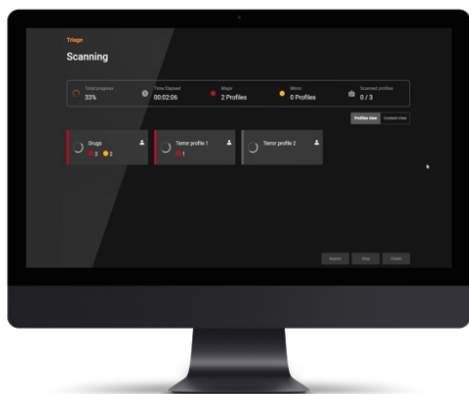

Why Triage devices?

- **Save Time:** Sort through large amounts of encrypted data quickly and identify the most relevant evidence to be prioritized for further analysis.

- **Prioritize Evidence:** Quickly acquire incriminating evidence (e.g., location and account data) to support arrest warrants and field interviews.

- **Leverage the Advantage:** With quick prioritization and meaningful extractions, start surfacing more breakthrough evidence and improve case resolution.

With Quick View, you can identify the following

- **Device identity**
  including IMEI, IMSI, ICCID and more.

- **User identity**
  such as phone number, emails and more.

- **Usage details**
 including Installed apps, storage and more.

With Triage you can

- Create search profiles

- Customize search values and severity level for each criteria

- Run multiple searches on one device

- Generate the initial report

How does it work?

Ins👁ts.

			Generate report

Predefine the data profile search criteria → Scan and search → Is the device relevant or not? → Decide the next step → Generate report

Quick View and review → Is the device relevant or not? → Decide the next step

Extract device

Your benefits when Triaging with Cellebrite Inseyets:

- ✓ Critical Information in Minutes
- ✓ Customizable Profile Scan Criteria
- ✓ Access Valuable Data
- ✓ Data Privacy
- ✓ On-Scene Analysis
- ✓ Automated Data Processing
