Autumn 2025
Release Fact Sheet
October 2025

Cellebrite's Autumn 2025 Release is redefining what is possible in digital forensics and investigations and how organizations can combat mobile-based threats. Enhanced workflows now enable teams to lawfully collect more data, analyze it with greater clarity and act on findings faster and with greater confidence. At the same time, new capabilities in mobile threat detection and vulnerability research give security professionals a decisive edge against the growing complexity of mobile risks.

Whether safeguarding the public or protecting private interests, you will be equipped to uncover the truth, counter emerging threats and respond with speed and precision.

THE CELLEBRITE PLATFORM
PRODUCT AND SERVICES

Guardian
INVESTIGATE

Introducing Guardian Investigate: Guardian Investigate is an AI-powered SaaS solution, integrated with Guardian, designed to digitize the entire investigation lifecycle and turn overwhelming volumes of evidence into clear, actionable insights.

Guardian Investigate unifies and analyzes multiple evidence types within a secure, centralized solution, helping investigative teams connect the dots, see the bigger picture faster and ensure no critical detail is missed.

Built with AI-powered workflows and advanced analytics, the solution empowers investigative units to resolve cases more efficiently, build compelling prosecutorial narratives and operate with greater intelligence—all within a unified, collaborative workspace.

Now currently in beta testing available through select Cellebrite Design Partners, Guardian Investigate is slated for general availability in early 2026.

Sign up now to be among the first to experience the future of investigations.

Inseyets

Cellebrite Inseyets is the definitive digital forensics suite and includes the industry-leading capabilities needed to close more cases. Inseyets brings together the advanced extraction of Premium, the next-generation of UFED and the power of Physical Analyzer (PA) with new capabilities to enhance speed and efficiency.

- **Device Access Enhancements:** Our latest updates restore Android access, expand full file system (FFS) extraction across newer Android models, introduce new AFU access for previously unsupported Android devices and deliver ongoing improvements to iOS FFS workflows.
Available Now

- **Outside of the Lab Extractions:** A new packaging option with Inseyets (Core Offline) empowers frontline teams to extract, triage and collect data outside of the lab. It's built for non-experts in a multitude of environments enabling fast and secure extractions.
Available Now

- **Expanded Portfolio Integration:** The Inseyets.PA & UFED to Guardian integration simplifies the workflow, making it easy to transfer extracted data for centralized review, preserve chain of custody and increase collaboration across teams. This allows for mobile evidence to flow securely into broader workflows, accelerating case timelines and unifying digital forensics across your agency.
Early Access Program Available in December

- **Access More Devices:** We have improved our device access capabilities using enhanced and exhaustive methods allowing us to gain extensive access to both newer and older generation iPhones allowing for improved backlog reduction.
Available Now, with Additional Capabilities Coming through December

Digital Collector.

Digital Collector empowers investigators to do quick, comprehensive triage and analysis with the reliability they've come to trust from Cellebrite. Utilize Digital Collector to search for data on computers with advanced search features, create decrypted physical images of the latest operating systems and capture important live data such as Internet, chat and multimedia files in real time to streamline investigations.

- **Support for the latest Windows and Mac Operating Systems:** Digital Collector supports the latest Windows and Mac operating systems quickly after they are released to ensure investigators are equipped with the most up-to-date tools.

- **Provides 4TB storage devices:** New, larger 4TB drives help ensure your investigations are supported with more efficient storage options.
Available Now

Guardian

Cellebrite Guardian is a cloud-based solution that brings together centralized digital evidence management with sharing and review capabilities, allowing an entire case team to access what they need from anywhere while maintaining a clean, unbreakable chain of custody.

- **Ingestion from Graykey:** Bridge the gap between extraction and insight by ingesting mobile evidence from Magnet Graykey into Guardian for real-time collaborative examination and review. Now case teams can access evidence collected from multiple tools in a single shared location.
  Available in December

- **Guardian Global Expansion:** Cellebrite now operates in Ireland, with additional regions coming soon. This allows more EU customers to access the collaborative power of Guardian while meeting regional data residency needs.
  Available Now

Guardian
COLLABORATE

- **Guardian Collaborate for Enterprise:** Corporations can now use Guardian Collaborate to instantly share mobile data online with HR, legal teams and other non-forensic experts during internal investigations. Users benefit from Guardian's SaaS-based intuitive workflow to easily surface critical insights, collaborate in real-time with key stakeholders and keep data in house without sharing externally to eDiscovery review platforms.
  Available Now

Pathfinder

Cellebrite Pathfinder accelerates investigations by using AI to quickly find evidence, uncover leads and connect people to digital data. It normalizes digital evidence from multiple sources and uses machine learning to spot patterns and reveal insights from mobile, cloud, computer, CDR and video data. Decode UFDs 4X faster directly in Pathfinder, eliminating the wait for lab exports. Built-in decoding to 50+ event types including newly added Activity Sensor, Financial Account and Transfer of Funds, delivers faster insights and accelerates case closure.

- **Pathfinder AWS GovCloud:** Pathfinder is now available for deployment on AWS GovCloud, marking a significant expansion that enables us to meet the rigorous security and compliance standards required by federal, state and local government agencies.

  By hosting in GovCloud, agencies can leverage the full power of Pathfinder's investigative and analytical capabilities in a secure, isolated environment designed to handle sensitive data and mission-critical workloads.

  This new deployment option ensures that more investigators and analysts can use Pathfinder to accelerate justice while maintaining the highest level of security.

  Additionally, our latest enhancement introduces new efficiencies by leveraging cloud-native capabilities to reduce monthly costs—making Pathfinder accessible to agencies of all sizes across both AWS Commercial Cloud and GovCloud. This gives you the flexibility to choose the solution that best fits your budget and operational needs.
  Available Now in the US

Smart Search.

Smart Search cuts through the noise of the billions of digital traces to identify critical information and connections. Get a detailed overview from publicly available data to make search warrants stronger and drive your investigations forward. With just a few clicks, Smart Search surfaces everything you need – reducing hours of manual searching to minutes. Here's how it works:

- **Watchlists:** Surface critical insights directly from your investigation results. Administrators can now upload Excel files of investigation cases. When relevant keywords appear in the results, the system automatically identifies and flags them and surfaces them in dedicated a Watchlist. This allows investigators to gain faster context and visibility for emerging patterns.
  Available Now

CORELLIUM Solutions

Cellebrite, through Corellium, brings highly differentiated capabilities for analyzing iOS, Android and IoT devices for cybersecurity research and testing. Defense, intelligence, private sector and large public safety organizations gain powerful new tools including:

- **Viper:** Security penetration testing of mobile applications to minimize risks and meet corporate and regulatory compliance requirements.
  Available Now

- **Falcon:** Deep threat research of mobile devices to uncover vulnerabilities and analyze malware.

TRAINING & SERVICES
Cellebrite Services: Meeting You Where You Are

Cellebrite offers a full range of services designed to meet organizations at every stage of their journey. From implementation and onboarding to training and certifications, on-demand Learning Hubs and expert advisory services, we provide flexible options tailored to your needs. Whether delivered on-site or on-demand, our services help teams adopt new workflows, strengthen digital evidence practices and accelerate case outcomes.

- **Learning Hub:** Quick, on-demand training for core solutions like Inseyets, Guardian and Pathfinder—available anytime, free in MyCellebrite.
  Available Now

- **Cellebrite Operator of Inseyets UFED (COIU):** Self-paced course introducing mobile extraction workflows and triage in Inseyets.UFED—ideal for quickly getting up to speed or transitioning from legacy solutions.
  Available Now

- **Inseyets: CCO, CCPA and CASA (Translated Courses):** Core courses now in French, Spanish, German and Portuguese—expanding access for global teams.
  Available Now

- **Inseyets: CCO, CCPA and CASA (Self-Paced Courses):** Earn Cellebrite certifications at your own pace with flexible, self-guided formats.
  Available Now

- **Advanced Access Workshops (AAWS):** Engage in immersive, onsite workshops designed to sharpen examination skills and deepen product expertise. These hands-on sessions cover key topics like Inseyets.PA and cryptocurrency. Plus, enjoy Capture the Flag: an interactive challenge that reinforces learning through real-world scenarios.
