

Organizations Can Securely Access Computer Endpoints Anywhere They Are Located

Hybrid work is here to stay, and no matter where employee or custodial endpoints are located, organizations need the ability to access, collect and review data from computer endpoints quickly and efficiently, and without disrupting business productivity.

Introducing **Cellebrite Endpoint Inspector SaaS**: a digital intelligence solution that provides a single source for secure remote access, collection and analysis of data. Endpoint Inspector SaaS allows users to selectively collect from Mac and Windows computers, as well as Linux servers.

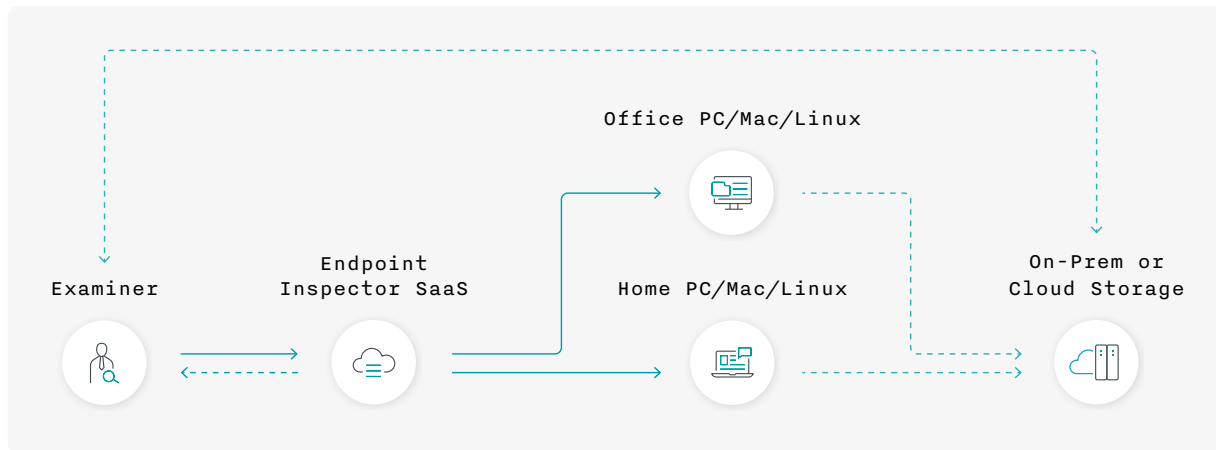

Cellebrite Endpoint Inspector Enables:

- ◆ Businesses to ensure transparency and compliance with all areas of legal, IT and HR through thorough, comprehensive remote data collection.
- ◆ Several examiners to conduct independent investigations at once.
- ◆ Examiners to simultaneously connect and collect from Mac, Windows and Linux regardless of geolocation.
- ◆ User management, permissions and audits to be tracked on an online server.

Corporate investigators and eDiscovery practitioners can safely and securely collect data from computers over the network without having the devices in hand.

Cellebrite Endpoint Inspector lets the administrator set up endpoint agents to be deployed in advance or at the time of collection using the company's software deployment system. Once a user logs into the web interface, they can create targeted acquisitions that can be viewed in real-time, run immediately, or be scheduled to run at a later time; set up and manage agent groups; and manage users and permissions. External storage, network, SFTP, Amazon S3 and Azure blobs can be leveraged for data collection repositories.

Main Capabilities of Cellebrite Endpoint Inspector

- ✦ **Simplify** investigations through a single platform to enable end-to-end visibility from collection through analysis and all the way to review.
- ✦ **Acquire** and preserve data from computers with repeatable collections.
- ✦ **Leverage** a unified collection workflow for all endpoints.
- ✦ **Minimize** business disruption with intuitive collection workflows.
- ✦ **Seamless** data collection allows you to exercise full control over collection options, precisely targeting data and devices. Maintain control over where data is stored and customize the storage location to align with the collection source.

Benefits of Cellebrite Endpoint Inspector

With help from our industry-leading development team, and resources and support from our global teams, we can give you unparalleled access to computer endpoints all over your network... anytime, anywhere.

- ✦ **Collect** – Seamlessly collect files of interest
- ✦ **Analyze** – Data from computer endpoints
- ✦ **Target** – Relevant data for accelerated analysis
- ✦ **Secure** – Authenticate users and requests
